

Knowledge grows

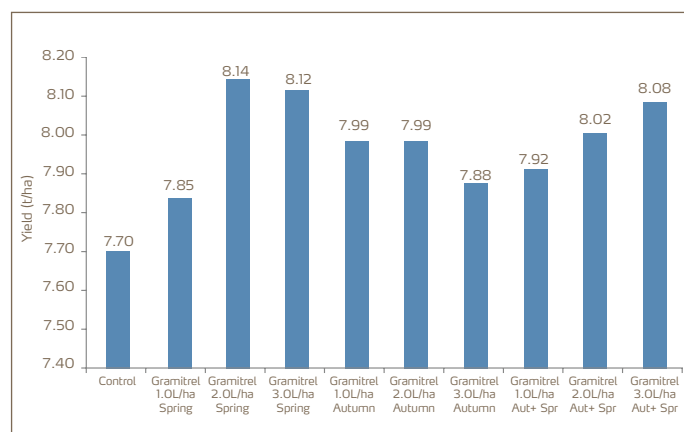

YaraVita GRAMITREL – 2018 trials increase yields by 0.44 tonne/ha in a low yielding year

- Consistent yield response for 3rd year in a row.
- Highest yield came from a spring application at 2 L/ha gave ROI of 6:1
- Autumn application of 1 L/ha gave a ROI of 8:1
- All the applications showed an increase above the control.
- A combined autumn and spring application gives a good insurance for best results.
- **YaraVita GRAMITREL** is a crop specific combination of several nutrients that are important for cereals in the autumn and spring. This product is a precaution for potential micronutrient deficiencies before they start to show symptoms; as once this occurs then yield is already being lost.

2018 UK Leaf Analysis: Wheat

GRAMITREL Rate and Timing, Yorks 2018

Low yielding year

The key nutrients in **YaraVita™ GRAMITREL** include Manganese, Copper, Zinc and Magnesium. With the benefit of excellent compatibility which means it can be co-applied with most crop protection products for ease of use. Check www.tankmix.com for details.
